

EasyNotes: Documentation

Adding Note Component - 1-2

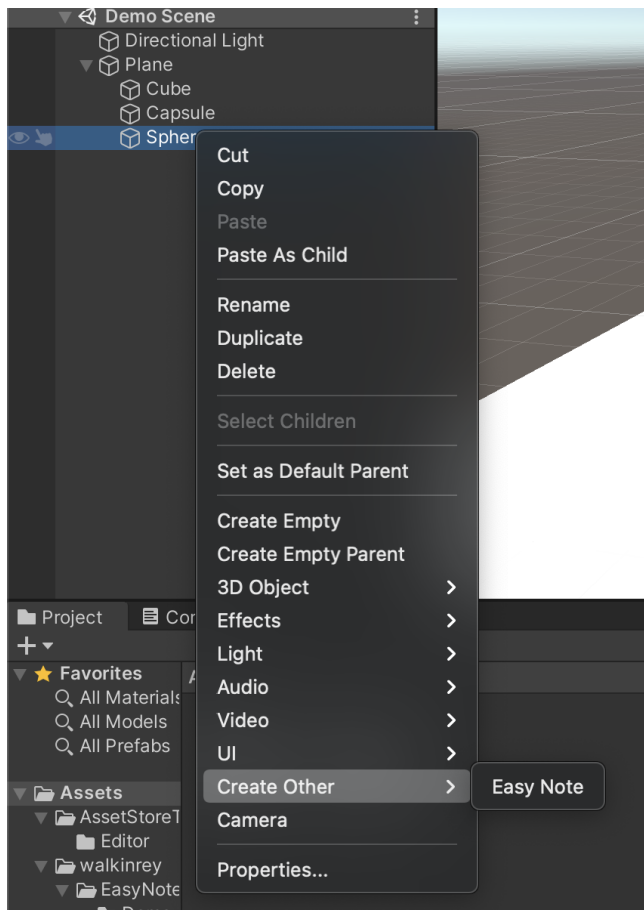

Editing Note Component - 3

Viewing all Notes on Scene - 4

Adding Note Component

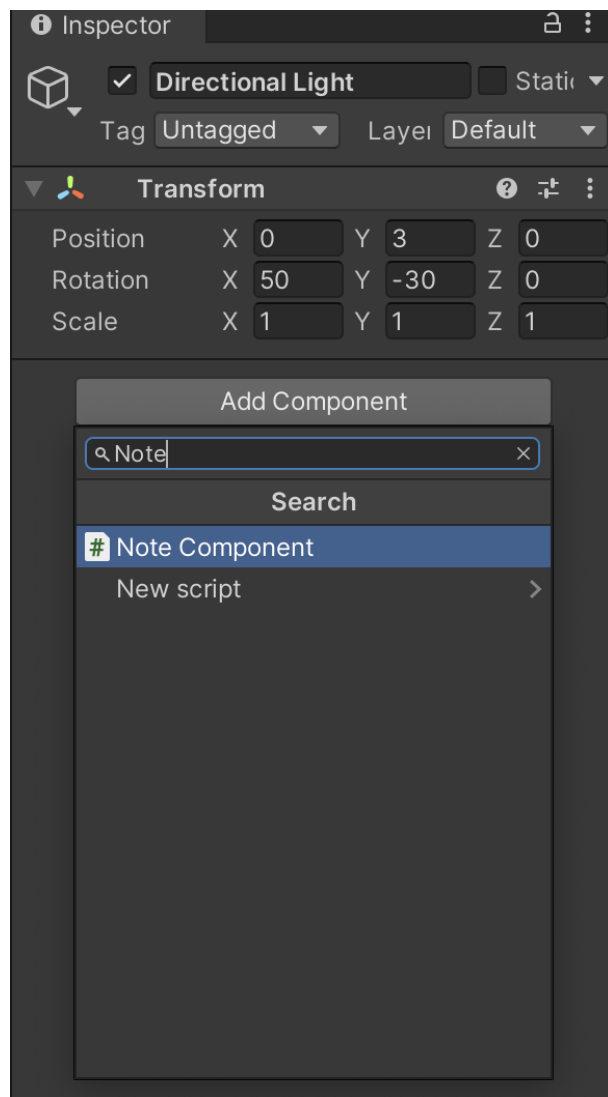

There are several ways to add this component:

1. Select the object to which you want to add a component, right-click, and select /Create Other/Easy Note

Adding Note Component

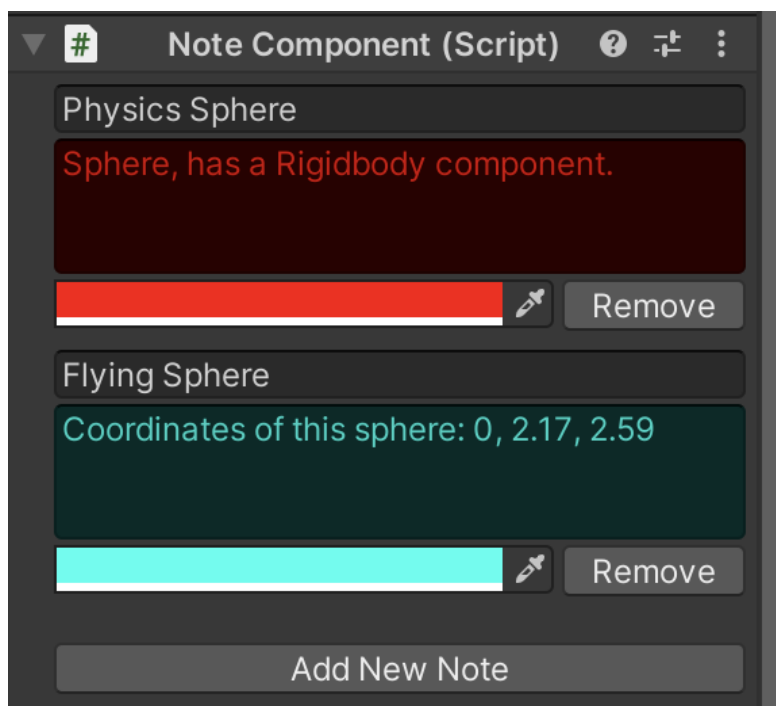

2. Select the object to which you want to add a component, and add component 'Note Component' through inspector

Editing Note Component

This component doesn't have too many settings. You can add a new post, change its title, text, color, or you can delete it.

On one component, you can create many records without having to add multiple components.

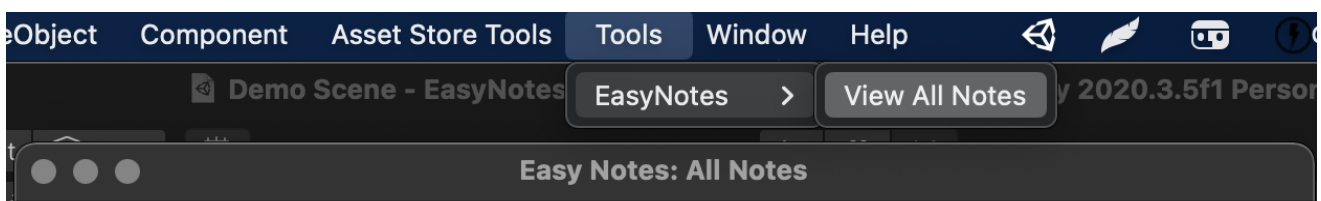

Viewing all Notes on Scene

If you need to view all the notes on the current scene, then you have such an opportunity.

The menu with all notes is located in the toolbar along the following path: / Tools / EasyNotes / View all Notes

By default, all notes that are present on the scene are loaded. If you need to find any specific note, then there is a search for this. You can find a note by its title, text, or the name of the object to which it is attached.
